- I was unable to attend discussion, however I am basing this review off the review session the TA hosted. She provided very valuable insight into the subject and expanded very well upon course ideas, showing more ways to approach problems than were introduced in lecture.
 - Wonderful TA. Great communicator and always clearly and directly answered all questions. I often found myself learning much more from the once a week 50 minute discussion than from an entire week of lecture. I wish that she had been giving the class lectures.

- Lang is a very efficient teaching assistant. She would go through every homework problems we had encountered, which helped us to learn the materials a lot. It would be better if Lang could provide some extra lecture notes although that's optional. Anyway, I believe that Lang would be a great instructor in the future. Really thank you for all your efforts!
 - She explained well and I could learn a lot.
 - She is okay but not great.
 - She is very helpful, but not super helpful. still a good TA

- Awesome
 - Def one of the best TAs in the math department! Actually dedicated and prepared for each discussion. Girl power
 - Great TA, very very helpful and explained concepts clearly. I like the structure of discussion where she covers some of the concepts but focuses on examples relevant to the concepts we learned previously. And overall, she was very enthusiastic and prepared to teach!
 - Jackie is a great TA. She is very passionate about the students learning the material correctly. Although she is a bit harsh on grading homework assignments, she was very fair and wrote many helpful comments on every homework assignment. She also brought in visual aids to help us better visualize 3-dimensional shapes. I found the discussion sections very helpful.
 - Jackie was a really good TA. She was a bit nervous at times, but she was always helpful and approachable.
 - Jackie was a very helpful TA. Not only did she led organized discussion sessions but provided much help for students during her office hours.
 - She s really nice and approachable, and her office hour is very organized.. everytime I go to her office hours, I feel like I learned more than I could learn in the class or discussion session. Especially, Abstract Algebra class requires you to organize your thought and write neat proof..and she was perfectly helpful to organize my thought..so that I could write neat proof on my own. In this regard, she is really effective TA, especially for Algebra class
 - organized lectures, with plenty of time to answer any questions on homework or from lecture and managed to provide extremely simple yet accurate definitions of the group structures to allow us to grasp them properly. on top of all that, the level of patience for the lack of student participation while working through proofs in class was amazing to say the least.

Comments Report

2. Comments

- 2.1) Please use the space provided for any comments you wish to make which are pertinent to the educational process. These may include all aspects of the course: teaching, examinations, grading, textbook, etc.
- Discussion sessions are so helpful because my TA was very clear and effective in teaching the information. However, I feel like discussions were way too short for going over the material because the quiz takes 10 minutes and we only have 40 or less minutes to go over the material. Most of the time, we are only able to go over 3 homework problems when we need help on 7 or more problems.
 - I believe that the teaching assistant can successfully elaborate on homework questions; but her methods do not always match the professor's methods, which, at times, causes confusion.
 - I think doing homework problems in discussion is helpful to learning. However, because discussion is so short, it is hard to cover some problems that a lot of people asked questions on. I think discussion could be a half hour longer so we could learn more. Most of actual lecture seemed to be proofs, which don't exactly help with problem solving so a lot of the learning we did would actually happen during discussion. If we made discussion a little bit longer so we could cover more material, I think that would be very helpful.
 - Jackie is a great TA and she is very good at explaining any questions that we have. She is incredibly smart (so smart that occasionally have to ask her to dumb it down). She tries her best to help us out. The class became increasingly difficult and the homework assignments became longer and longer, but Jackie made a point of emphasizing the most important things to take away from the homework.
 - Jackie is a very good teaching assistant who clearly explains how to solve certain problems. Sometimes, she skips a few steps in between and I get lost though, which makes it difficult to follow these problems.
 - Jackie is a wonderful TA and in my opinion, a much better teacher than Dupey. I wish I could've gotten to know her better by going to office hours but I had class during them. Overall, I hate how this course does not follow the book and how we are constantly tested on proofs rather than the application of the mathematical skills we should be learning. For example, our last midterm had about 50% of proofs with about 5 minutes each time wise. This class is the worst one I have ever taken throughout my entire life and I would not advise anyone to take it.
 - Jackie provided very sufficient and useful coverage of class materials to supplement the lectures. Very useful discussion sections.
 - Jackie was a great TA. She knew the course material very well and was able to explain all of the material in clear ways. She always tried to answer all questions and if wasn't able to answer the question during discussion or office hours would make sure to send out an email. I am very happy I had her as a TA for this course.
 - Jackie was a wonderful TA. She explained everything really clearly and made sure every student understood the problem before moving on. She is one of the best math instructors I've ever had.
 - Jackie was very helpful as a TA. I think that going over the homework questions helped us a lot and her concern for our education really showed.
 - My TA did an exceptional job, both in her discussion section and also in office hours. When the professor didn't go over certain aspects clearly in class, she was able to explain things thoroughly. She was also very supportive of all of her students and was happy to help answer our questions. I didn't find it hard at all to ask for help.

- Very helpful in discussion with explaining important information. Also very easy to talk to in office hours and very helpful!
- You are a very nice T.A.. Thanks to your discussion, I have figured out bunches of confusing math problems.

2. Comments:

- 2.1) Please use the space provided for any comments you wish to make which are pertinent to the educational process. These may include all aspects of the course: teaching, examinations, grading, textbook, etc.
- Compared to a previous TA I had for math, Jackie was an excellent TA. She was knowledgeable about what she was teaching and was always prepared. She taught us so that our weekly quizzes seemed like they were easy, so we didn't have to stress as much on grades as much as actually learning the material. She encourages student participation and students interacting actively with each other.
 - Great TA. Very knowledgeable about course material.
 - I didn't keep up with my homework and so I did badly in my quizzes. Shocker. I feel like maybe if I was a better student I could appreciate Jackie more, but I hated the fact that her office hours were when they were. Overall though I'd say she was a pretty spiffy TA!
 - In section, Jackie really tried to clarify the concepts the professor hastily, and sometimes sloppily, covered. She explains herself very well. She's a great TA for the class.
 - Jackie Lang is a helpful and excellent T.A. who always answers any questions we may have concerning the homework or exams. She is welcoming in office hours and in discussion sections.
 - Jackie is a great TA. She is fully capable of explaining each problem and she is also very patient.
 - Jackie was a great TA and she was better at explaining concepts than the professor.
 - Jackie was a really effective TA and understanding and helpful during discussion and office hours. She was extremely willing to help if you asked.
- I was a little startled at the difference in difficulty between the first and second midterms, but allowing us to drop a midterm was really generous and I thought that was a good way to handle the situation.
- Jackie was a very effective TA. Almost everything I learned in the class was from her. Where the Professor failed, Jackie picked up and exceeded. If she was not my TA, I would have done poorly in the course, as it was difficult to learn by the teaching style in lecture.
 - Jackie was a wonderful TA! Her effective and straightforward teaching enhanced my learning and made me enjoy the subject. The structure of sections (short period of group work then examples on the board) utilized the 50 min well. Furthermore, her kindness and encouragement decreased my stress and made me want to go to section every week. She thoroughly answered all questions and was very good at explaining concepts in terms students were able to understand. I hope all my future TA's are as great as Jackie.
 - Jackie was very helpful in making sure we understood the material, and very accommodating during office hours. Even while strapped for time, she would endeavor to answer as many questions as possible in as clear a manner as she could. Her quizzes also ensured at least our familiarity with the material. I find nothing wrong with her teaching.
 - Jackie was very helpful with understanding the course material. She answered all questions completely and always strived to ensure our understanding of the material
 - She is a great TA that knows the material very well. Whenever students brought up questions during discussion, she would be able to answer the questions in multiple ways so that we could all understand where the answers came from. The only bad thing was her availability, which was rather limited. But

when I went to office hours and discussion, I thought I learned a fair amount of material.

- T.A. was extremely helpful and always available after class to answer questions
- The section is crucial to understanding course material, and helped a lot with the understanding. Lang outlined the ideas clearly.

- Always willing to help! Thanks Jackie!
 - Generally, this course is good. And various activities are provided. But, more paper material is needed for TAs, since some of them are international students, may have difficulties in understanding instantly. And maybe the class should be arranged more systematically to make it easy to follow.
 - Jackie is the best.
 - Jackie was an excellent TA for this course. She gave us lots of useful advice and helped facilitate great discussions.
 - Overall I would say that the course wasn't very useful in preparing us to be TAs. The microteaching was somewhat useful, but much of the advice was not practical. For instance most of the advice tended to tell us that we should be extremely fastidious with our teaching and spend tons of time preparing for sections and give students lots of help outside of class. This is nice, but we're all grad students and in reality this is not practical advice. It would be nice to have more practical advice instead of "do as much as you can". Many of the meetings seemed to be not that useful. For instance the meeting in the library was a mega-waste of time in my opinion.
 - The TA is good and experience. But the class is not really helpful.
 - she is really nice and helpfull

- Great TA! She really did think about her students. She was very approachable and always prepared with her notes. The fact that she spoke English very well was helpful, in my opinion.
 - Jackie is a godsend! When I stumbled into section, mind twisted and notes (taken verbatim from what the professor wrote on the board) incomprehensible, Jackie broke down what the professor took 2 hours to cover clumsily into 50 minutes of easy theorems and steps. If only Jackie taught the class, I might feel like spending my summer here was worth it. She's super available, helpful, and a fantastic teacher.
 - Jackie was a great TA for this summer course. She was always very helpful during discussions and was always willing to help us with any problems we had. She had very effective discussion sections and always helped clear up any doubts we had on various concepts.
 - Jackie was organized, punctual, caring and persistent. If the class did not understand a concept, she would not let us leave until we did. In my opinion, she should have been the one lecturing the entire class because the class had a very hard time understanding the main lecturer/professor. Whether that may be due to a language barrier or personal preference is no excuse because this is supposed to be a top notch university. How are we supposed to learn if we cannot even understand our own professor and leave his class absolutely clueless? Thank goodness Jackie was there to save us and save our experience in this class. We need more dedicated TA's at this school like Jackie.
 - Jacky is an amazing TA. She takes time to ensure everyone understands the concepts and is always prepared to meet up out of class time to discuss any problems. She should be the one teaching the class. Also I love the fact that i can actually understand her and she is not socially awkward like a lot of the other math TA's. GREAT TA
 - Jaclyn is a clear and concise T.A that makes learning the most annoyingly tedious methods of math a quick abc checklist that every student now possesses. Wished she was actually the professor.
 - My TA shows a lot of concern for whether we understand the material or not. She takes the time to go over concepts more than once. She's organized in preparing her notes before discussion. She even took extra time out of discussion to hold review sessions for our exams. Her effectiveness as a TA is excellent. Though she has trouble explaining things in a way that we will understand, she keeps trying until we do understand the material. I'm glad Jackie was a TA for this class.
 - She's a good teacher. She makes concepts and problems clear for us. She made more sense than the professor.

- I really appreciate Jackie. It is she that gave me really big help in my summer session, every time I asked problems about textbook and homework, she will solve them with real patience. Since it is my first time to come to the US, the system is completely different from my country's. Thanks to her help, I can successfully finish this session. Thanks.
 - If it were not for Jaclyn, I, along with many others in the class, would not have been able to understand the material. She comes to discussion with a very structured lesson plan that helps us understand exactly what she is trying to convey. The professor does a really poor job in conveying knowledge to us, and he often skips steps and assumes we understand. Jaclyn's lesson plans really break it down for us, and without her, I would not be doing nearly as well in this class as I am right now. She is always very approachable after discussions and wants you to understand exactly what you are doing wrong. She is also very open during office hours and helps us go step by step and understand the intuition behind the math we are doing. She is one of the best TAs I've had thus far at UCLA and I am a third year.
 - Really clear and helpful!
 - She always made sure to make the most of the hour that was given to her and explain more clearly than all my precious math TAs combined.
 - She is a good TA. Her TA session is pretty clear. Her TA session and the lectures are good complements.

SPRING QUARTER 2011

Math 31B, sec. 1E – Integration and Infinite Series

9-9-7

Good TA! ☺

8-8-6

She went a little fast through problems toward the end of the quarter.

6-6-6

She reviewed homework problems that were confusing and was always courteous about answering questions.

9-9-5

Speak English-South Campus Miracle. Gives examples & explanations—best Math TA.

4-7-3

You teach too fast. You ask if anyone has questions, but move on before we have the chance to ask anything. You don't show your work or clearly explain what you are doing on the board, so I got lost a lot.

9-9-6

Great TA, better than the professor. Review sessions are particularly helpful.

7-7-7

Jackie knows her material and effectively supplements the course material. She needs to be more confident though as she gets frustrated by all questions, even stupid ones. She rarely messes problems up. Great TA, great knowledge, helped with course.

7-9-3

Very available and helpful, thank you.

7-8-7

She's very devoted in helping students inside & outside of class. Even though the office hours is very limited. I still find it very helpful.

7-5-5

She is a good TA. She is clear when explaining concepts. Sometimes I believe she goes a little too fast and take more time explaining the material, but overall she does a good job.

9-9-8

LANG, Jaclyn

Always well prepared; knew material well; I thought going to discussion was more useful than attending lecture; organized; helped a lot; open to questions; excellent ☺.

9-9-5

Jaclyn is a very effective TA who explains concepts in a clear and concise matter. I understand a good amount of the course material through her sessions. I would like to see her give us more effective shortcuts and tricks when it comes to solving complicated problems. But overall, she's an excellent TA and I highly recommend her.

7-6-7

I was able to understand Jaclyn and everything she says. She's organized and I believe that's a very important factor. She also holds review sessions before midterms and they were extremely helpful, too. Sometimes, Jaclyn seems unsure of what she's doing. I guess because it's her first time teaching, but towards the end of the quarter, it was better. She's a great TA.

Math 31B, sec. 1F – Integration and Infinite Series

9-9-9

The teaching assistant writes way to fast.

8-9-4

Patient and thorough!

9-9-9

Very articulate & concerned, great TA.

6-6-4

Good TA very helpful! I wish though she put harder examples because the final/midterms aren't like that simple. Overall good

9-9-9

Even though it was her first year being a TA, she was adept at it and showed great knowledge about math.

8-8-7

Jaclyn is very helpful since I could never made her OH she is always willing to stay after class for a bit to help me on my questions. During class she'd made the atmosphere comfortable enough that I wouldn't be second to ask her questions.

9-9-9

Jaclyn Lang is a very helpful TA who is always available and willing to help inside and outside of classroom. She is also very knowledgeable, organized and prepared. She is a great TA.

7-8-7

- A good TA with organized discussion.
 - Tries her best to explain and succeeds
 - Is nice inside/outside the classroom
 - If only the TA's knew how the final would be set-up it would have helped more.
- All in all, one of the better TA's @ UCLA.

9-9-2

Jackie did a wonderful job of helping us understand the material. She used great example problems. She has been the best TA I have had at UCLA.

8-9-8

TA was always helpful and explained lectures very thoroughly in great detail.

7-7-2

She was a great TA! I wish that she taught lecture, honestly. I would come from lecture completely lost, then came to discussion and fully understand the material.

7-7-5

The professor is not very good at teaching. The TA is helpful in explain the things that the professor teaches poorly.

9-8-9

Lang is very clear and concise with math concepts. She is one of the best TAs I've ever had. She was really helpful and enjoyed every second of discussion.

9-8-5

TA was very helpful & organized.

7-7-7

I was able to understand the course material. Without discussion sections, I would've been so lost.

9-9-NA

Jaclyn is an exceptional TA. She is always available to answer questions. Her discussions are always very organized and she takes time to prepare sessions despite her own very busy schedule. She actually wasn't my "assigned" TA but my own TA did not prepare discussions so I chose to attend her sections. I don't know how I would have done it without her because the professor isn't very good at teaching either.
